TECHNICAL EXPERIENCE

Product Manager **Austin, TX**
Cloudflare *May 2026– August 2026*

- Drove product roadmap for an internal AI-powered tool suite on Cloudflare's developer platform, partnering with AI innovations and Go-To-Market teams to accelerate cross-functional workflows.
- Built a centralized data aggregation platform unifying internal data sources into a single API and web interface, eliminating data silos across engineering and sales workflows.
- Trained and deployed an ML forecasting model on Salesforce data, integrating an LLM API to automate quarterly sales predictions.

Technical Project Manager **Syracuse, NY**
Slice Consulting *February 2025 – Present*

- Lead 4-person technical team to define and deliver AI integrations that streamlined firm-wide consultant workflows, aligning roadmap priorities with board members and non-technical stakeholders.
- Developed AI tools, MCP servers, and internal services across a unified firm-wide interface.

AI Fellow **Syracuse, NY**
Handshake AI *January 2026 – Present*

- Designed and delivered production-quality AI coding benchmarks and solutions by orchestrating multi-agent pipelines for implementation, testing, verification, and adversarial problem solving, supported by shared memory that persisted requirements, failure patterns, experiments, and reviewer feedback.
- Deployed Dockerized CI/CD pipelines (GitHub Actions) to automate code validation, quality checks, and multi-agent benchmark trials.

Software Engineering Intern **Syracuse, NY**
Advance Student Resource Systems, Inc. *October 2025 – May 2026*

- Built a full-stack Next.js reporting and survey platform using Next.js, GraphRAG, and PostgreSQL, including a reporting engine for filtering and calculations, data visualization, and LLM-generated insights
- Applied agile and git workflows (Scrum, PRs, code reviews), and implemented CI/CD pipelines utilizing GitHub Actions and AWS container services with test-driven development (Jest, Playwright)
- Collaborated with stakeholders to gather requirements and translate business needs into UML architecture diagrams

Quantitative Research Intern **New York, NY**
Rebellion Research *August 2025 – October 2025*

- Fine-tuned LLMs in PyTorch to build AI trading agents with CLI tool integration, enabling automated portfolio construction and algorithm-driven trade execution.
- Built feature engineering pipelines in Python (pandas, numpy) to extract signals from historical price data and 13F filings stored in MySQL

AI Engineering Intern **Pittsburgh, PA**
TalkMeUp AI *June 2025 – August 2025*

- Led 6-engineer team to refactor platform architecture for AI-native workflows, rebuilding core features to support LLM integration and real-time agent interactions.

TECHNICAL PROJECTS

Live Restaurant Call Agent • *Next.js • AWS EC2 • Cloudflare • PostgreSQL* ***September 2025***

- Shipped an AI call agent and order management system for a local restaurant — handling 100+ live customer orders daily, deployed on AWS EC2 with Cloudflare edge routing for sub-200ms response times.

EDUCATION

Syracuse University • *School of Engineering and Computer Science • Whitman School of Management*
B.S in Computer Science • Minor in Finance *Expected May 2027*
Relevant Coursework: Foundations of AI, Intro to AI & ML, Data Structures and Algorithms, OS, Computer Organization, Discrete Math, Linear Algebra, Statistics, Comp. Networking, DB Management, Intelligent Robotics

SKILLS

Languages & Frameworks: *Python, SQL (PostgreSQL, MySQL), Next.js, Angular, J2EE, Java, C++*
Cloud & Infrastructure: *AWS (EC2, Lambda, S3), Docker, Kubernetes, Bitbucket, CI/CD (GitHub Actions)*
AI/ML: *PyTorch, LangChain, OpenAI SDK, Multi-Agent Systems, LLM Fine-Tuning, GraphRAG*
Data: *Kafka, pandas, numpy, matplotlib*
Engineering Practices: *Agile/Scrum, API Design, Test-Driven Development (Jest, Playwright), UML*
Product Management: *Product Roadmap, Backlog Management, A/B Testing, Go-to-Market Strategy*
